

Rebecca Havens Gore

Principal Product Designer • AI Platforms • Developer Tools • Design Systems Lead

becca.h.gore@gmail.com | Austin, TX | Portfolio: [becca-havens-gore.github.io/portfolio-data](https://github.com/becca-havens-gore/portfolio-data)

Summary

Design Systems Lead • Principal Product Designer • UX & AI Experience Architect with 10+ years of experience designing scalable design systems, platform UX frameworks, AI experience standards, and high-impact enterprise products. Proven success unifying multi-product experiences, accelerating engineering velocity, and mentoring teams into design maturity at Rapid7, AlphaWave, and Kronologic. I design and scale the systems that make enterprise products coherent, usable, and trustworthy. My work unifies design and engineering, shapes platform-wide experiences, and brings responsibility and clarity to AI UX.

Focus Areas

- ▶ **Data-dense UX:** tables, filters/query builders, drill-ins, batch actions, dashboards, reporting/export
- ▶ **Observability-adjacent workflows:** triage, investigation, correlation, time-range analysis, signal comprehension
- ▶ **Platform systems:** scalable components, cross-surface patterns, governance, adoption & migration strategy
- ▶ **Measurement:** task success, time-to-triage/time-to-insight proxies, adoption, accessibility outcomes

Professional Experience

Staff User Experience Designer - Portfolio Experience Enablement | Rapid7 (April 2016 – Present)

- ▶ Led a Unified Platform Experience that standardized core investigation interactions (tables, filtering/querying, batch actions, navigation) across 6 products, improving cross-product consistency (+50%) and task success (+28%).
- ▶ Architected the Data Visualization System (DVS), a unified framework for telemetry views (dashboards, cards, drill-ins, reporting templates) powering analytics across the portfolio; reduced design time 60% and increased engagement 30%.
- ▶ Established an AI Experience Standard for responsible automation: UX patterns, trust/explainability models, and an AI permissions framework designed for high-stakes operational workflows.
- ▶ Created Design Forum + UX Standards governance, increasing accessibility compliance 40% and reducing design drift across teams and releases.
- ▶ Led the Rapid7 Design System (RDS) and MUI migration strategy, improving UI implementation speed 40%, reaching 80% adoption, and meeting WCAG 2.2 AA across the platform.
- ▶ Mentored designers and built enablement programs (onboarding, curriculum, shared standards) to scale delivery quality and consistency.

- ▶ Partnered with engineering on data contracts, performance constraints, and phased rollout plans to ship platform standards iteratively with measurable impact.

Lead UX Designer & Design System Architect (Contract) | Alphawave (2020-2021)

- ▶ Established AlphaWave's UX strategy and visual foundation from scratch, partnering with product/engineering to define core workflows and experience principles.
- ▶ Built the AlphaWave Design System (component architecture, styles, documentation) to enable consistent UI delivery and scalable product growth.
- ▶ Designed key data-heavy product surfaces (dashboards, asset intelligence, risk scoring, scanning, reporting) and led research/prototyping to support product-market fit.

Lead UX Designer & Design System Architect (Contract) | Kronologic (2020-2021)

- ▶ Introduced Ant Design (AntD) and rebuilt the UI foundation into a scalable system, standardizing patterns across the product.
- ▶ Led a full redesign of navigation + information architecture + dashboard structure, modernizing interaction design across core surfaces.
- ▶ Improved workflow clarity and usability while reducing engineering rework and strengthening enterprise customer credibility.

UX Designer | Bypass Mobile (2013-2016)

- ▶ Designed mobile + tablet-first POS, ordering, and concessions experiences used at major stadiums/venues nationwide.
- ▶ Led UX for latency-sensitive, high-throughput workflows (transactions, inventory, staff ops, analytics) in collaboration with product and engineering.
- ▶ Shipped features for payments, QR ordering, and real-time sales tracking supporting thousands of concurrent users, plus reusable UI components to speed delivery.

Education

MS in Information Studies (MSIS)

University of Texas at Austin
2011-2013

MA in History

University of Texas at Austin
2007-2011

BA in Medieval & Renaissance Studies

Vassar College
2004-2007
